## "STIELWELD" SHEARS

### The Process

Over five hundred distinct operations are required to make the Wiss "Stielweld" Shears. This illustration shows a blade ready for the first "Stielweld" process—our own process—which is largely responsible for the wonderful cutting edge of the Wiss shear.

This hand points to the tough frame which enables the Wiss "Stielweld" Shears to stand the hardest of strains without breaking.

This hand points to a piece of the finest crucible steel, which welded to the frame gives a cutting surface of such perfect temper that it is possible for the Wiss shears to stay sharp longer than any other.

These two parts are forged into one—forever one. They can never be separated. Both are there to do their work—the backing giving strength and toughness; the steel its marvelous cutting quality.

This is one of the unique processes which have made Wiss "Stielweld" Shears most famous and given them a large sale throughout the whole world, even in Sheffield, the home of English cutlery.

On the blade beside the screw is stamped this trade mark

J. WISS & SONS  
NEWARK N. J.  
U. S. A.

It identifies the genuine and the best shears made—wherever bought

### The Result

This shows how a Wiss "Stielweld" blade looks after it has been shaped, tempered, ground and polished ready to go into the hands of the "adjuster."

He sees to it that the blades *match* to a hair's breadth, that they cut *clean* from heel to point, and are so joined that they never work loose.

That's why tailors and dressmakers everywhere prefer Wiss "Stielweld" Shears—that never disappoint, never pinch or chew the cloth, no matter whether you are cutting the thinnest of silks or the heaviest woolsens.

If tailors and dressmakers who live by their shears adopt the "Wiss" as standard, they are a safe purchase by *you* for your trade.

For over fifty years we have made Wiss Shears and Scissors the best that brains and money can put together, so that

**WE GUARANTEE** every article bearing our trade mark to be perfect in workmanship. If unsatisfactory for any reason, we will exchange it.

The name "Wiss" on the blade is your guide.

## HOW GOOD SHEARS ARE MADE.

WELDING

HARDENING

PEENING

**N**OTHING is more difficult to make than a perfect pair of shears or scissors.

By perfect, we mean shears and scissors which have the following requirements:

**High Grade Material.**

**Perfect Temper.**

**True Cutting Edges which will last indefinitely.**

All shears may look alike to you. Even at the first glance an expert is sometimes unable to tell the quality. But time will surely show the difference between a poor shear and a Wiss.

Did you ever use a pair of shears and have them chew the cloth instead of cutting it clean, or have the blades grind as you open and shut them until the edges of that shear were like a saw? That shear was not perfectly tempered or the adjustment of it was poor and it will never work satisfactorily.

**A Wiss never disappoints.**

Wiss shears are all tempered perfectly by our exclusive process. This is one of our most valuable secrets, as it insures an edge that is always sharp.

### High Grade Material.

The very best material enters into the construction of Wiss shears. They are not made of the "just as good" material, but of the very best. When you buy Wiss shears you know that you are not paying for an experiment, but for something which has proved satisfactory since 1848. You take no chances.

### Good Workmanship.

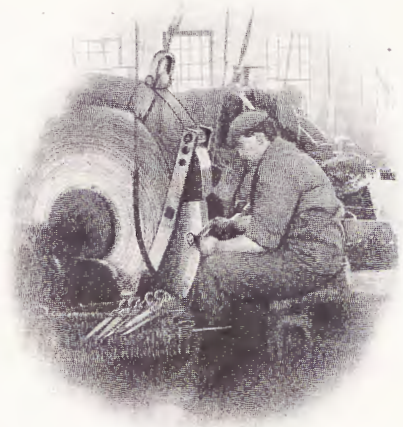

Shears and scissors must be made by hand, their perfect adjustment depending entirely upon the skill of the workman.

Each Wiss shear and scissors is handled nearly 500 times in the factory before it is finished, and to make a first-class shear each of the 500 operations must be conscientiously performed and absolutely accurate.

The Wiss process of making shears is recognized as the very best, especially when applied to shears which are used for heavy work, such as cutting cloth and fabrics of all kinds. To-day you will find WISS SHEARS throughout the entire world.

### Strict Inspection.

Each Wiss shear or scissors is subject to at least ten different inspections in various stages of manufacture. Inspectors who are experts in their work (some of whom have devoted their whole life to shear making) must O. K. the shear or scissors before it is offered for sale.

**TERMS.**

---

**TO THE TRADE.**

Wiss Shears were first placed on the market in 1848.

To-day Wiss makes more "High Grade" shears than any other manufacturer in the U. S. A.

Since the name "Wiss" was originally put on a piece of Cutlery it always has been our aim to place on the market the finest article that could be produced. That we have succeeded is proven by the fact that Wiss Cutlery is to-day recognized by cutlery experts as the Best the World over. Wiss Cutlery combines best material, highest skilled labor, most careful inspection and over half a century of practical experience in its manufacture.

Our guarantee is unlimited, every article is fully warranted, exchangeable if defective or not satisfactory.

Every detail of manufacture has our personal attention. Suggestions toward any improvements always receive careful consideration.

We are constantly improving our facilities and are always in a position to fill your requirements promptly and satisfactorily.

---

**TERMS.**

Prices and discounts quoted are net 30 days, subject to a cash discount of 2 per cent if paid within ten days from date of invoice.

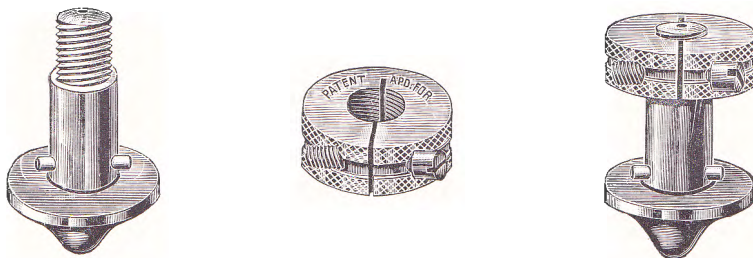

All accounts not settled within thirty days will be subject to sight draft.

We make no charge for boxing, and deliver goods free on board Newark, N. J., or in the Borough of Manhattan, New York City.

**J. WISS & SONS CO.**

## THE WISS SIMPLEX SHEAR BOLT.

Patent Applied For.

All the objections and annoyances of the old style bolt done away with.

No springs, no levers or other parts to be lost or become out of order.

The shear can be easily taken apart and the lint and dirt that invariably collects under a shear bolt removed, overcoming the annoyance of having shear blades hard to open and close.

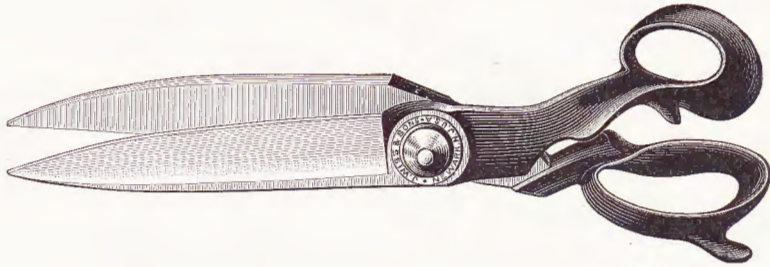

The bolt, when taken out of the shear, consists of only two pieces and can only be replaced correctly.

The operator can quickly adjust the shear to work looser or tighter by the use of an ordinary small screw-driver and a slight turn of the nut.

The bolt is so simple and practical in construction that it at once receives the endorsement of all mechanics and tailors who see it.

Fitted on N pattern Tailor Shears (page 6) without extra charge when so ordered.

**"N" Pattern, TAILORS' SHEARS.**

Fitted with "Simplex Bolt" when so ordered.

**WISS FORGED STEEL TINNER SNIPS.**

**Steel Laid Blades.**

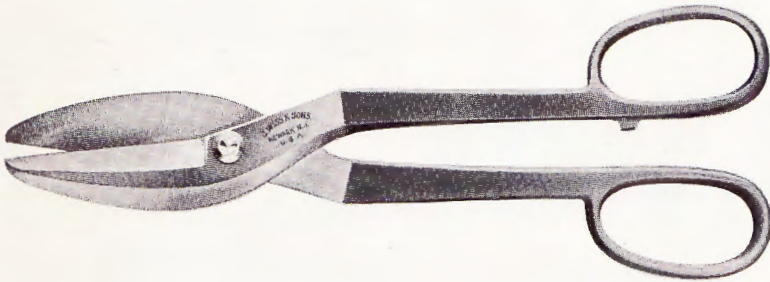

The Best by test. Will snip the head of a nail and then cut the thinnest tissue.

The frames of the Wiss Snip are made entirely of Forged Steel. On the inside of the blades a piece of the finest Crucible Steel is welded, giving the Wiss Snip a perfect cutting edge. Being perfectly tempered they will stand the roughest of work, and the edges will not break or chew.

The blades are perfectly shaped and will not give at the points. The Handles are made to fit the hand and will not tire the workman's hand even after continuous use.

Every Wiss Snip is thoroughly tested and finished so that it is at once recognized by mechanics as a high grade tool.

**Regular Pattern.**

Number	Full Length	Length of Cut	Price per Pair

**Snips with Left Handles, Right Blades.**

Regular, Circular Blade and Combination Snips, **50c.** per pair extra list.

**WISS FORGED STEEL TINNER SNIPS.**

Steel Laid Blades.

New Combination Pattern

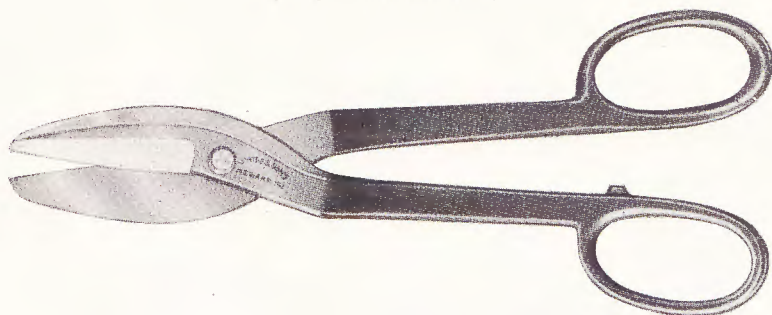

These Snips are made with straight blades, but the jaws are ground and shaped in such a manner that they can be used as readily for cutting curves and irregular shapes as for straight work, thus combining all the advantages of both the circular and straight snip in one tool.

Number	Full Length	Length of Cut	Price per Pair
19	12½ in.	3 in.	\$2.00
18	13½ in.	3½ in.	2.50
17	14½ in.	4 in.	3.00

**Reversed Blade Snips.**

(Right Hand Cut).

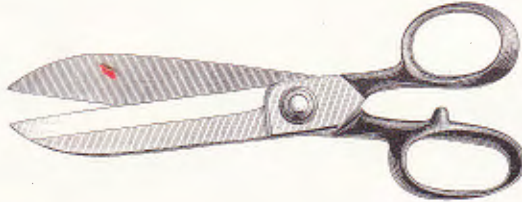

Are used with right hand. When cutting, workman has to look at right side of his snip to see line he is cutting.

Number	Full Length	Length of Cut	Price per Pair
10R	11½ in.	2½ in.	\$1.90

## WISS RAZORS.

---

The Wiss Razors are the most perfect that can be produced. The material used in the blades is the best that money can buy. All workmen engaged in making them are experts in their own particular line, whether in forging, tempering, grinding, polishing or finishing.

When a Wiss Razor leaves our factory it is ready to shave—it is in **perfect condition**. It has been set, inspected and tested and it is subject to our unlimited guarantee—we will replace free of charge any razor which does not prove satisfactory, if returned in good condition.

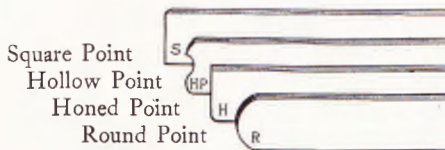

Every claim we make for the Wiss Razor is a rational one, backed by the merits of the instrument—you can break a Wiss—you can dull a Wiss—you can make it useless—But—you have to do it deliberately. Ordinary handling or usage will never rob a Wiss Razor of its good qualities.

When you buy a Wiss Razor you are not trying an experiment, but are buying a razor which will give you and your customers absolute satisfaction.

All our razors have full polished blades, crocus finished tang and back, unless otherwise specified.

We will supply any shaped razor point desired in the razors illustrated on pages 41 to 54, with the exception of the single shoulder razors (page 54), which are made only with square, honed or round points. Razors listed on pages 38, 39 and 40 are made only with points as shown in illustrations.

The shape of a razor point is generally a matter of individual preference. The honed and square points are the most generally sold.

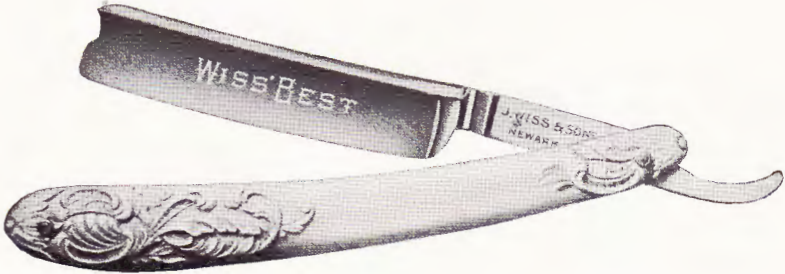

---

RAZORS.

---

**THE "WISS BEST" RAZOR.**

Extra Fine Finish.

Fancy Antique Handle and Tang. Thin Concave. Blade  $\frac{5}{8}$  inch wide.

Price \$40.00 per Dozen.

---

## THE "SURE COMFORT" RAZOR.

Extra Fine Finish.

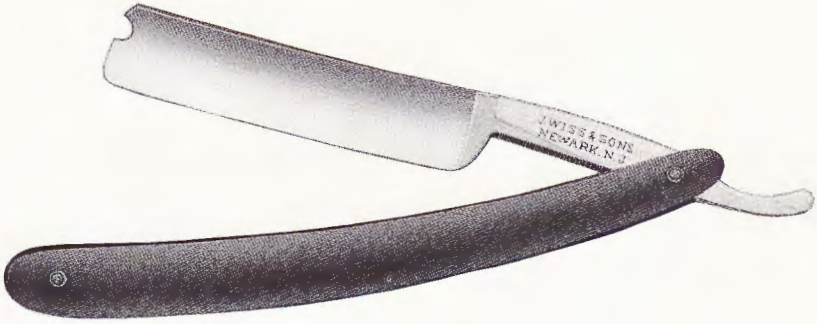

White Bead Handle. Thin Concave. Blade  $\frac{5}{8}$  inch wide.

Price \$30.00 per Dozen.

**THE WISS "SURE-GRIP" RAZOR.**

Will not slip from your fingers while shaving no matter how moist or wet your hands may be, for the construction of the tang prevents it.

The under side of the tang has fine cuts like a file, while the upper side is finished with fine ridges.

One of the handsomest as well as most practical razors made.

**Made with Flat Black Rubber Handle.**
