A double impression (hot drop) forging showing the top and bottom blades of a pair of shears, forged from specially selected bar steel.

The shear frame after flashing (except in handle) and scale have been removed.

The shear frame and high carbon crucible steel inlay section pinned together and ready for the welding process.

The shear frame and inlay welded together to make one solid piece. The flashing and scale not yet removed.

The inlaid shears after it has been hardened, tempered, and ground. It is now ready for polishing, edging, and assembly with its mate (of exact hardness) and finishing.

The finished blade.
